

## NEW RECORDS OF STONEFLIES (PLECOPTERA) WITH AN ANNOTATED CHECKLIST OF THE SPECIES FOR PENNSYLVANIA

E.C. Masteller<sup>1</sup>

### ABSTRACT

Original collections now record 134 species in nine families and 42 genera. Seventeen new state records include, *Allocapnia wrayi*, *Alloperla caudata*, *Leuctra maria*, *Soyedina carolinensis*, *Tallaperla elisa*, *Perlesta decipiens*, *P. placida*, *Neoperla catharae*, *N. occipitalis*, *N. stewarti*, *Cultus decisus decisus*, *Isoperla francesca*, *I. frisoni*, *I. lata*, *I. nana*, *I. slossonae*, *Malirekus hastatus*. Five species are removed from the list of species for Pennsylvania.

Surdick and Kim (1976) originally recorded 90 species of stoneflies in nine families and 32 genera from Pennsylvania. Since that time, Stark et al. (1986) reported 94 species, Stewart and Stark (1988) listed 95 species, and Earle (1994) added 14 species and deleted four species as misidentifications. Grubbs (1996) reported three new state records bringing the total species for Pennsylvania to 117. One-hundred-thirty-four species of stoneflies are now confirmed for Pennsylvania (Masteller, 1996). This includes 16 species of Capniidae, 13 species of Leuctridae, 16 species of Nemouridae and 10 species of Taeniopterygidae in the Euholognatha. In the Systellognatha, the Chloroperlidae are represented by 15 species, Peltoperlidae four species, Perlidae 25 species, Perlodidae 30 species, and the Pteronarcyidae five species. The county records for all Pennsylvania stonefly species can be found on the WWW at Penn State Erie, The Behrend College's site (<http://www.pserie.psu.edu/>), biology faculty under my name.

Pennsylvania, with 67 counties (Figure 1) covers an area of 117,412 square kilometers (Guilday, 1985). The eastern border is located at approximately 74°43' W longitude and extends to 80°31' W on the western border. The southern border is located at 39° 43' latitude and approximately 42° N on the northern border. Fenneman (1938) divided the land surface of North America into 20 physiographic provinces. Berg et al. (1989) have developed a physiographic province map for Pennsylvania with seven major physiographic provinces: (1) Central Lowland (2) Atlantic Coastal Plain (3) Blue Ridge (4) New England (5) Ridge and Valley (with 2 subdivisions) (6) Piedmont Province (with 3 subdivisions) and (7) Appalachian Plateaus (with 7 subdivisions). The seven major physiographic units are dominated by the Appalachian Plateau which include glaciated and montane sections. There are over 100 water drainage subbasins in six major basins: Delaware River, Susquehanna River, Ohio River, Lake Erie, Genesee River, and Potomac River. Due to the great diversity of habitats throughout Pennsylvania, it is likely additional species will be collected in the future.

Figure 1. Map of Pennsylvania, showing the counties.

These seven physiographic provinces provide an abundant range of habitats. The mountain streams at higher elevations provided some of the most diverse populations. More than 90 species inhabit the Appalachian Mountain Section of the Ridge and Valley Province in central Pennsylvania. Three sections of the Appalachian Plateaus Province, all mountainous have the next most diverse fauna with approximately 60 species in each section- Allegheny Mountain, High Plateau, and Mountainous High Plateau. Close to 40 species were present at lower elevations in the Central Lowland Province, Pittsburgh Low Plateau, Glaciated Low Plateau, and the Piedmont Upland. Areas with rare species occurred in the north central counties and in the Pocono area of eastern Pennsylvania.

I began collecting stoneflies in the early 1960's in Erie county and continued with collections in northwest Pennsylvania (Masteller 1983, Dionisi and Masteller 1988). Additional records for Pennsylvania can be found in Bobak & Lawrence (1991), Grubbs (1996), Hitchcock (1974), Kondratieff & Nelson (1995), Kondratieff, et al. (1988) Ricker (1949), Ricker & Ross (1968), Ross (1971), Stanger & Baumann (1993), Stark (1983, 1986, 1989), Stark & Gaufin (1974, 1976), Stark & Szczytko (1988), Stark & Ray (1983), Stark, et al. (1988), Surdick (1985), and Szczytko & Stewart (1981).

The new state records and a current list of stoneflies of Pennsylvania follows.

#### NEW STATE RECORDS OF STONEFLIES IN PENNSYLVANIA

##### CAPNIIDAE

*Allocapnia wrayi* Ross - 3♂ CHESTER Co., East Branch White Clay Creek, 1 Mar 1980, C. F. Burgoon & C. E. Dunn. 2♂-1♀ GREENE Co., Ryerson Station St. Pk., 16 Feb. 1995, Mark A. Lethaby. 2♂ MIFFLIN Co., Station 10 U.S. Rt. 522 Atkinson Mills, 19 Feb 1956, J. F. Hanson.

##### CHLOROPERLIDAE

*Alloperla caudata* Frison - 1♂ BRADFORD Co., Susquehanna River, Towanda, 8 Jun 1994, E. C. Masteller. 7♂-6♀ PIKE Co. Dingmans Ferry, 29 May 1996, B. C. Kondratieff. 6♂-2♀ PIKE Co. Dingmans Falls, 29 May 1996, B. C. Kondratieff. 6♂-1♀ TIoga Co. U.S. Rt. 15, South of Blossburg, 14 Jun 1991, R. M. Duffield.

##### LEUCTRIDAE

*Leuctra maria* Hanson - 1♂ PIKE Co., Kleinhans Creek, 28 May 1996, B. C. Kondratieff. WAYNE Co. Tanners Falls, trib. East Dyberry Creek, 30 May 1996, B. C. Kondratieff.

##### NEMOURIDAE

*Soyedina carolinensis* (Claassen) - CHESTER Co. East Branch White Clay Creek, 2♂ 27 Feb-17 Mar 1978, 13♂-4♀ 21 Feb-11 Apr 1980, 1♂ 27 Feb 1981, David H. Funk. 1♂ PHILADELPHIA Co. Roxborough, 26 Apr 1910, G. M. Greene.

### PELTOPERLIDAE

*Tallaperla elisa* Stark - 1♂ POTTER Co., Lyman Run, 28 May 1988,  
R. M. Duffield.

### PERLIDAE

*Perlesta decipiens* (Walsh) - 1♀ CAMERON Co., Sinnemahoning Creek, Driftwood, 27 Jul 1989, E. C. Masteller. 7♀ CRAWFORD Co., French Creek, 22 Jun 1994, E. C. Masteller. 4♂-2♀ LAWRENCE Co. Neshannock Creek, 3 Jul 1992, Jack Williams. 1♀ MERCER Co. Neshannock Creek, 30 Jul 1994, E. C. Masteller.

*Perlesta placida* (Hagen) - 9♂ CRAWFORD Co., French Creek, Saegertown & Venango, 29 Jun 1995. E. C. Masteller. 3♂-2♀ ERIE Co., Penn State Univ. Behrend Campus, 30 Jul 1973, 17 Jul 1977, E. C. Masteller & Karl Miller.

*Neoperla catharae* Stark & Baumann - 1♂ PERRY Co., Juniata River, 22 Jul 1993, Andrew Shiels. 1♂ WYOMING Co. Meshoppen Creek, 10 Sep 1989, E. C. Masteller.

*Neoperla occipitalis* (Pictet) - 1♀ BRADFORD Co., Susquehanna River, Riverside Campground, 18 Jul 1989, Mark Lethaby. 3♂-3♀ ERIE Co., West Branch, French Creek, 29 Jun 1995. E. C. Masteller.

*Neoperla stewarti* Stark & Baumann - 1♂ ERIE Co., West Branch, French Creek, 29 Jun 1995, E. C. Masteller. 3♀ JUNIATA Co., Juniata River, 30 Jun 1990, E. C. Masteller.

### PERLODIDAE

*Cultus decisus decisus* (Walker) - 12♂-14♀ PIKE Co., Dingmans Ferry, 29 May 1996, B. C. Kondratieff. 1♂ WAYNE Co., Beach Lake, 27 May 1994, W. C. Wheeler.

*Isoperla francesca* Harper - 1♂ CAMERON Co., Sinnemahoning Creek, Driftwood, 27 Jul 1989, E. C. Masteller.

*Isoperla frisoni* Illies - 1♂ HUNTINGDON Co., Colerain St. Pk. 22 Jun 1952, S. W. Frost. 1♀ MONROE Co., Kistler Run, 9 Jun 1994, E. C. Masteller.

*Isoperla lata* Frison 1♀ POTTER Co., Kettle Creek, Oleona, 4 May 1996. E. C. Masteller.

*Isoperla nana* (Walsh) - Fourmile Creek, Penn State Univ. Behrend Campus, 18♂-20♀ 20 May-26 Jun 1980, 4♂-4♀ 19 May-4 Jun 1981, 14♂-19♀ 17 May-6 Jun 1983, 8♂-8♀ 21 May-6 Jun 1983, 1♂-1♀ 25-29 May 1990, E. C. Masteller. 1♂ LAWRENCE Co. Slippery Rock Creek, 30 Jun 1994, E. C. Masteller. 1♂ VENANGO Co. Mill Creek, trib. French Creek, 29 Jun 1994. E. C. Masteller.

*Isoperla slossonae* (Banks) - 1♂ CLINTON Co. Fishing Creek, Lamar National Fish Hatchery, 29 Apr 1995, S. R. Moulton.

*Malirekus hastatus* (Banks) - 1♂ CHESTER Co. East Branch White Clay Creek, 8 May 1980, D. H. Funk.

An annotated list of the Plecoptera of Pennsylvania. The range of adult collection dates is followed by the list of counties thus far recorded for each species.

*P. dorsata* (Say) – 12 Apr - 19 May: Allegheny, Crawford, Dauphin, Huntingdon, Philadelphia, Union, Wayne

*P. pictetii* Hagen – 20 May: Huntingdon, Philadelphia

*P. proteus* Newman – 6 May - 20 Jun: Berks, Centre, Clinton, Franklin, Lycoming, Monroe, Potter, Somerset, Sullivan, Susquehanna, Tioga, Warren, Westmoreland

Several species of *Isoperla* that have only a letter designation will be described by Stanley Szczytko. Baumann and Grubbs (1996) have recently described *Soyedina merritti* from Pennsylvania. Baumann (1996) described *Amphinemura appalachia* with the type locality in Pennsylvania.

Five species are being deleted from the Pennsylvania list. These species have been removed because they were misidentified or their known occurrence was well outside the range of Pennsylvania. These are *Paracapnia opis* (Newman) reported in Frison (1942), *Sweltsa mediana* (Banks) reported in Surdick and Kim (1976), *Amphinemura varshava* (Ricker) reported in Surdick and Kim (1976), *Isoperla mohri* Frison reported in Surdick and Kim (1976), *Pteronarcys scotti* Ricker reported in Robertson (1980) as *Allonarcys scotti*.

An additional 39 species that have been reported from the neighboring states of New York, Ohio, Maryland, West Virginia, and Ontario, Canada are listed as potentially occurring in Pennsylvania (Appendix 1).

## ACKNOWLEDGMENTS

Identifications of many species were made by B. C. Kondratieff who I also thank for reviewing this paper. Others who assisted with identifications were B. P. Stark, R. Surdick, S. W. Szczytko, R. W. Baumann, P. P. Harper and J. I. Earle. J. I. Earle also participated in the initial stages of this project. I thank S. A. Grubbs for making his records available for inclusion in this paper. The following individuals provided records; C. H. Nelson, B. C.

Kondratieff, G. A. Hoover and S. R. Moulton. The following institutions provided material; The Academy of Natural Sciences in Philadelphia, Stroud Water Research Center, National Museum of Natural History Washington D. C., Bureau of Plant Industry, Harrisburg, PA, Monte Bean Museum, Provo, UT, Frost Entomological Museum, University Park, PA and the Royal Ontario Museum, Toronto, Canada. This project would not have been possible without funding from the Wild Resource Conservation Fund which I gratefully acknowledge.

Voucher specimens will be deposited at the Smithsonian Institution, National Museum of Natural History, Washington, DC, and the C. P. Gillette Museum of Arthropod Diversity, Colorado State University, Fort Collins, CO.

The following species of stoneflies are not on the Pennsylvania list. Because of their proximity of records and types of habitat, they may be found in Pennsylvania. I have included them so that future workers will be alert to their possible presence in the state.

### ABSTRACT

A total of 312 species of caddisflies (Trichoptera) in 20 families and 60 genera were found to occur in Pennsylvania. These records were the results of collections from light trapping adults during 1989-91, reviewing major collections and extensive collections in the Erie area over the past twenty years. Ninety-two species are new records for Pennsylvania. This paper is a synopsis of the report entitled "Trichoptera Biodiversity of Pennsylvania" submitted to the Pennsylvania Fish Commission and the Wild Resource Conservation Fund that contained county distribution maps for each species along with annotated collection data. [J PA Acad Sci 66(2):68-78, 1992]

### INTRODUCTION

The caddisflies of Pennsylvania have been studied by numerous individuals since the 1800's beginning with Thomas Say (1828) and followed by Hyland (1948), Sykora et al. (1976), Sykora (1989), Weaver and Sykora (1979), Weaver (1988), and Swegman et al. (1981). The later studies provided comprehensive reports at specific sites or with specific families; the Rhyacophilidae and Lepidostomatidae being collected extensively by Sykora and Weaver. Swegman et al. (1981) collected 85 species from Linesville Creek from 1972-77 at the Pymatuning Laboratory of Ecology in Crawford County, University of Pittsburgh, and Seward and Swegman (unpublished) at the Bear Run Nature Reserve in Fayette County during 1976-77 collecting 47 species. Sykora (1989) completed a survey of Trichoptera of U.S. Army Corps of Engineers supervised reservoir outflows in western Pennsylvania.

Other monographs on caddisflies with numerous collections from Pennsylvania provided records; Brachycentridae (Flint, 1984), Uenoidae (Vineyard, personal comm.), Odontoceridae (Parker and Wiggins, 1985), Molannidae (Fuller, personal comm.), the genus *Cheumatopsyche* (Gordon, 1974), the genus *Ceraclea* (Morse, 1975), the genus *Pycnopsyche* (Wojtowicz, 1982), and the genus *Rhyacophila* (Weaver and Sykora, 1979).

Since one of the authors, E.C. Masteller, had extensive collections from northwest Pennsylvania taken over the past twenty years, it was decided to bring together this data with those studies referred to above from Pennsylvania. Collections from the different physiographic provinces of Pennsylvania were then completed to provide a comprehensive list of caddisflies from Pennsylvania with their locations of occurrence throughout the Commonwealth.

Regional North American records of species numbers in particular states or provinces are: New York - 170 (Betten, 1934), New Hampshire - 251 (Morse and Bickle, 1953 and 1957), Massachusetts - 181 (Neves, 1979), Maine - at least 220 (Bickle and Morse, 1964 and 1966), Virginia - 239 (Parker and Voshell, 1981), Alabama - 342 (Harris et al., 1991), Arkansas - 153 (Unziker et al., 1970), Illinois - 183 (Ross, 1944), Michigan - 181 (Leonard and Leonard, 1949), Wisconsin - 208 (Longridge and Hilsenhoff, 1973), Kentucky - 181 (Resh, 1975), and Tennessee - 298 (Etnier and Schuster, 1979).

### METHODS

A grant was obtained from the Wild Resource Conservation Fund to support this study. A literature search was conducted to locate references for Pennsylvania species of caddisflies. Then the collection at the Frost Museum of The Pennsylvania State University was checked for records and all unidentified material curated. Collections were reviewed at the Royal Ontario Museum in Toronto, Canada, The Pennsylvania Department of Agriculture collection in Harrisburg, PA, Stroud Water Research Center, Avondale,

\*Submitted for publication 4 April 1992; accepted 15 June 1992.

PA, The Philadelphia Academy of Natural Science and the National Museum of Natural History, Smithsonian Institution, Washington, D.C. as well as the personal collection of John Weaver at the University of New Hampshire. This study involved over 130 black light trap collections from 14 of the 15 physiographic provinces in Pennsylvania during 1990-91.

## RESULTS

In this paper, the species list for Pennsylvania is presented (Table I) and new records in the literature indicated by “\*”. There are 57 species in Pennsylvania that are considered uncommon which had five or fewer occurrences. Seven species indicated by “h” (Table I) are considered historic records, which have no occurrence in the past forty years. Collection for ninety-two species not previously recorded in the literature along with eleven historic records are presented in Table II. County maps with species occurrences were developed in the original report (Masteller and Flint, 1992) to the sponsor. Figure 1 indicates the collection sites with physiographic provinces of Pennsylvania (Rizza and Hughes, 1982). Figure 2 indicates the counties in Pennsylvania where collections were made by the senior author.

Records are for adults except when noted otherwise. Voucher specimens were preserved in 70% ethyl alcohol or pinned as adults and placed at the National Museum of Natural History, Smithsonian Institution, The Pennsylvania Department of Agriculture, Bureau of Plant Industry, and the Academy of Natural Sciences of Philadelphia.

## ACKNOWLEDGEMENTS

The authors wish to thank the Wild Resource Conservation Fund, and the Pennsylvania State University, The Behrend College for the financial support of this project. Also a special thanks to the dozen undergraduate students at Penn State-Behrend that assisted on this project, especially Suzie Confer, and our secretary, Kathy Mauro, who provided invaluable assistance. The various collectors we also acknowledge in the following table along with the various museums that allowed us access to their collections.
